the current rapid and complex advancement applications of electromagnetic em and optical systems calls for a much needed update on the computational methods currently in use completely revised and reflecting ten years of developments this second edition of the bestselling computational methods for

electromagnetic and optical systems provides the update so desperately needed in this field offering a wealth of new material this second edition begins with scalar wave propagation and analysis techniques chiral and metamaterials and photonic band gap structures it examines poynting vector and stored energy as well as energy group and phase velocities reviews k space state variable formation with applications to anisotropic planar systems and presents full field rigorous coupled wave analysis of planar diffraction gratings with applications to h mode e mode crossed gratings single and multilayered diffraction grating analysis and diffraction from anisotropic gratings later chapters highlight spectral techniques and rcwa as applied to the analysis of dynamic wave mixing in pr materials with induced transmission and reflection gratings and demonstrate the rcwa algorithm to analyze cylindrical and spherical systems using circular bipolar cylindrical and spherical coordinates the book concludes with several rcwa computational case studies involving scattering from spatially inhomogeneous eccentric circular cylinders solved in bipolar coordinates many of these examples apply the complex poynting theorem or the forwardscattering optical theorem to validate numerical solutions by verifying power conservation using common computational tools such as fortran matlab comsol and rsoft the text offers numerous examples to illuminate the material many of which employ a full field vector approach to analyze and solve maxwell s equations in anisotropic media where a standard wave equation approach is intractable designed to introduce novel spectral computational techniques the book demonstrates the application of these methods to analyze a variety of em and optical systems
