provides a broad snapshot of recent findings showing how the environment and genes influence behavior the great debate of nature versus nurture rages on but our understanding of the genetic basis of many behaviors has expanded over the last decade and there is now very good evidence showing that seemingly complex

behaviours can have relatively simple genetic underpinnings but also that most behaviours have very complicated genetic and environmental architecture studies have also clearly shown that behaviors and other traits are influenced not just by genes and the environment but also by the statistical interaction between the two this book aims to end the nature versus nurture argument by showing that behaviors are nature and nurture and the interaction between the two and by illustrating how single genes can explain some of the variation in behaviors even when they are seemingly complex genes and behaviour beyond nature nurture puts to rest the nature versus nurture dichotomy providing an up to date synopsis of where we are how far we ve come and where we are headed it considers the effects of a dual inheritance of genes and culture and genes and social environment and highlights how indirect genetic effects can affect the evolution of behavior it also examines the effect of non self genes on the behavior of hosts shines a light on the nature and nurturing of animal minds and invites us to embrace all the complexity nature and nurture generates and more explores exciting new findings about behavior and where we go from here features contributions by top scholars of the subject seeks to end the nature versus nurture debate forever genes and behaviour beyond nature nurture is a unique and eye opening read that will appeal to ph d students post doctoral fellows and researchers in evolution and behavior additionally the book will also be of interest to geneticists sociologists and philosophers

this is the second edition of an extremely important and well received book the editor has brought together an international team of experts in the subject producing a book which contains vital information on major aspects of this important subject it should appear on the shelves of animal behaviourists fish biologists and fisheries scientists

this volume contains the proceedings of a postgraduate course for medical practitioners of various specialties one purpose of the course was to provide factual data on developmental aspects of the brain and behaviour and about the possible impact of several important categories of internal and environmental factors upon neural development another purpose was to indicate the extent and the limitations of the methodology now available for the scientific approach of the study of the development of behaviour in general the investigator is faced with methodological problems of two types the proper definition and scoring of behavioural items and the isolation of the different factors that contribute to a particular behaviour an example of the latter is given in the very last paper which is concerned with attempts at unravelling under experimental conditions the contributions made by

various influences upon a single sequence of behaviour the course was held in leiden in november 1970 and was the third in a series of boerhaave courses instigated by the dutch growth foundation previous subjects have been somatic growth of the child in 1964 and human body composition in 1967 the programme was planned in collaboration with prof dr h h van gelderen dr d g lawrence prof dr f j monks prof dr h f r prechtl and prof dr h k a visser financial support was given by the pharmaceutical firms philips duphar sandoz and specia and by the dutch growth foundation major editorial contributions were made by anneke bot
